

BusinessCloud ai

The office of your company ■

Files, calendar, contacts, tasks, documents and invoices — in one place, with one account, on servers in Europe. Kenji, KENJTEC's AI, helps you write.

One account, no second password · Your data in Europe · Same price in year two

READY TO USE TODAY

Everything for your working day ■

These features are available in BusinessCloud.

Files

Create folders, bring back earlier versions and restore deleted items from the trash. With a link, you can share a file even with people who have no account.

Calendar

Plan appointments and see when an invoice is due: Invoice adds the payment deadline with a reminder.

Contacts

Customers, suppliers and all your other contacts in one address book. Customers you add in Invoice are added automatically.

Task board

Columns and cards for everything that needs doing — from the first draft to the finished task.

Documents

You create documents, spreadsheets and presentations via "New" and edit them right in the browser — without an office program of your own.

Invoices

Write quotes and invoices in Invoice. Paid orders from your WordPress shop automatically become invoices there.

Customers

A record for every customer: notes from conversations, follow-ups in your calendar, and the quotes and invoices from Invoice.

Projects

Task board, files, appointments, documents and expenses for a job in one project record — linked, never copied.

Expenses

You record supplier invoices and receipts with the document attached; totals are shown per currency.

Knowledge

A handbook for your company, made of pages and subpages — for your team only.

Lists

Suppliers, stocktaking or enquiries: you keep them together in shared lists with rows and columns.

Polls

Vote together on the date of the team meeting or a question for everyone — just among yourselves.

ONE WORKDAY. ONE CONNECTED FLOW

From the first file to the finished invoice ■

Import customers from your address book into Invoice. When you issue an invoice, Invoice saves the PDF to your files and adds the payment due date to your calendar with a reminder.

01

Save a file

A quote, draft or contract sits in your files instead of scattered across laptop and phone.

02

Record an appointment

The next step is in your calendar — Invoice adds an invoice's payment deadline by itself.

03

Plan a task

On the task board you arrange your tasks in columns and cards and see what's next.

04

Create an invoice

Select the customer from your address book. When you issue the document, Invoice saves a copy to your files.

FOR YOU AND YOUR TEAM

Bring your team into your office ■

You invite your team by email in your dashboard. With their own KENJTEC account, they work with the same customers, projects and documents — and in BusinessCloud you share a folder with your company's name.

- ✓ Seats and storage come with your plan — you share out the storage yourself.
- ✓ Two roles: "Team member" prepares document drafts; "Administration" can also issue documents and invite people.
- ✓ If someone leaves, their files and task boards go to someone who stays — never as a copy.
- ✓ Other companies can't find you or your team in BusinessCloud.

KENJI AND YOUR TOOLS

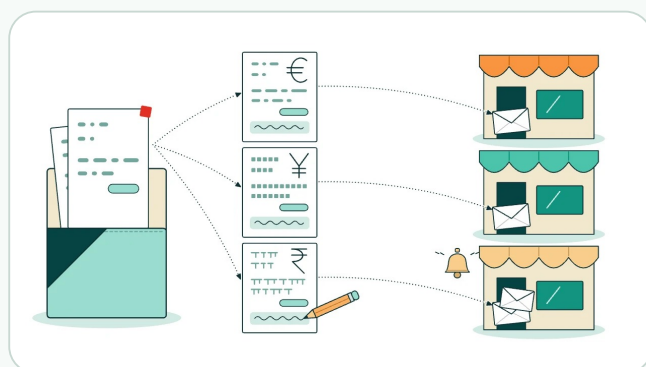

Connected, not scattered ■

Kenji helps you write

The AI is built right into BusinessCloud: chat, working with text and translating. Kenji draws on the same AI balance as your other KENJTEC tools — you see it as a bar, not as a sum to work out.

- ✓ Your letterhead with logo, colours, font and company details is ready as a template for new documents.
- ✓ The AI helps you write and draws on the same AI credit as all KENJTEC tools.
- ✓ After a confirmation prompt, you make images from your private cloud available for your website, shop and posts.

Invoices for customers anywhere

Invoice runs in the same window as your files. The document follows what your country requires — not a fixed template.

- ✓ The invoice PDF speaks your customer's language — twelve languages, including Arabic, Japanese and Hindi.
- ✓ Currency and number format adapt, down to the Indian digit grouping.
- ✓ You write the tax note yourself — if you write nothing, nothing is added for you.
- ✓ The PDF is then stored in your files, the payment deadline in your calendar.

PRIVACY IS NOT AN ADD-ON

Your data stays your data ■

✓ Files in Belgium

Your cloud files are stored in a data center in Belgium. The storage location is fixed; you do not have to set it up.

✓ One account, no second password

BusinessCloud takes over your KENJTEC sign-in. Anyone signed in on kenjtec.com gets in without typing anything again.

✓ You decide who sees what

You share files by link — with people who have no account. Other companies cannot find you or your people in BusinessCloud.

✓ Usable by everyone

Keyboard operation, dark mode, high contrast and a font for people with dyslexia are available.

An honest calculation ■

The price stays

What you pay in the first year you also pay in the second. No teaser prices, no quiet increase.

Cancel with one click

In the dashboard; you keep using BusinessCloud until the end of the paid period. Nothing is deleted.

You can always leave

Download invoices and quotes as an archive with PDFs and spreadsheets.

Open your office ■

Create an account, add a card, nothing is charged. Plans and prices are always current on the pricing page.
